Viktor Strohush Loyish

Full Stack Developer · Java · Vue 3 · Qt/C++ · AI-assisted development

Madrid, Spain · Available 100% remote · linkedin.com/in/viktor-strohush-loyish · github.com/byVik

PROFILE

From analysis to production.

Full Stack Developer with **over 5 years** building web applications with **Java and Vue 3 on PostgreSQL** and desktop applications with **Qt and C++20** for the audiovisual industry.

- I adapt quickly to any language or situation and take on whatever is needed, even if I have never worked with it before.
- I have worked for sectors as different as **healthcare, defense, sports and logistics**.
- I apply **Clean Code, SOLID and TDD**, and I have mentored junior developers.

VOLINGA · ARQUIMEA GROUP · SEP 2024 – OCT 2026 · REMOTE

Less code, better product.

-80% of the web platform code, approx.

Technical point of reference for the web platform since I joined: backend and frontend best practices, code organized by domain and a refactoring supported by AI agents.

- I removed dead and duplicated code and moved to **small, single-responsibility components and composables**. The web app became responsive, more stable and free of its long-standing bugs.
- I found and fixed **critical security vulnerabilities**: users' personal data exposed through the API and credentials exposed in the code.
- I set up **database backups**, which did not exist until then.

VOLINGA SUITE · QT · C++20 · QML

From web to desktop.

At Volinga I moved from the web to building, in **Qt and C++**, the interface of a desktop application for the audiovisual industry.

- I was in charge of the **look and behavior of the user interface** of Volinga Suite, with C++20, Qt Widgets and QML.
- Used in productions such as **Netflix's "Berlín"** and by major international studios and streaming platforms.
- **Full rebranding** of the website and the desktop application.

VOLINGA · CI/CD · AZURE DEVOPS

From commit to signed installer.

I automated the full desktop application pipeline in **Azure DevOps**.

- I built the **installer** (generated with Python scripts) and added **certificate-based code signing** for both the installer and the application.
- I managed the branching flow (test and release), **pull requests** and **production deployments**, in 2-week sprints.

ARQUIMEA · APR 2021 – AUG 2024 · MADRID

In almost every airport in Spain.

+1,000,000 COVID-19 test orders handled

I developed and provided on-call support for the platform: **Vue SPA, Java API (Micronaut), PostgreSQL** and CI/CD on Azure DevOps.

- Web and mobile applications **end to end**, from analysis to production, for clients in healthcare, defense, sports and logistics.
- Vue 3, Java (8, 11, 21) and Kotlin, in cross-functional Scrum teams.
- **Mentoring** junior developers in best practices and reusable component-based development.

ARQUIMEA · MOBILE APPS

Mutua Madrid Open: from Angular to Vue 3.

I led the migration of the tournament's mobile app from **Angular 8 + Ionic to Vue 3 + Capacitor**: better performance and user experience, and a codebase shared with the website.

- I proposed and implemented the migration from **Vue 2 to Vue 3 with the Composition API**: a more modular architecture and reusable logic.
- I delivered an Android application in **180 hours against an estimate of 400**, more than 50% under the estimate.

AI-ASSISTED DEVELOPMENT

Agents in orbit, judgment at the center.

I work with AI agents as a core part of my workflow, **always reviewing and validating** what they generate: shipping faster without lowering the quality bar.

- **Large-scale refactors** with Claude Code and OpenAI Codex: cleanup, dead code removal and reorganizing entire projects by domain.
- I wrote the project's **AGENTS.md** with the rules and conventions the agents must follow.
- **MCP servers and skills** to give agents context, reinforce best practices and optimize token usage.
- **Spec Driven Development**: from the specification to the tests and the implementation, applied in OrderFlow.

PERSONAL PROJECT · SPRING BOOT · KAFKA · VUE 3

OrderFlow

Order and inventory microservices with **Java 21 and Spring Boot 3**, **hexagonal architecture and DDD**, PostgreSQL and Flyway.

- **Choreographed saga with Apache Kafka**: idempotent stock reservation, pessimistic locking against overselling, retries and a dead-letter topic.
- Data JPA, Security with JWT and OpenAPI; frontend in **Vue 3 + TypeScript + Pinia**.
- Tests with JUnit 5, Mockito, **Testcontainers** and Vitest; Docker Compose and CI on GitHub Actions.

OUTSIDE WORK

I also make games.

As a hobby I design, build and publish my own games: from the engine to the store, each with the technology that suits it.

- **Gravity Flip** · One-tap arcade · Android · Published · 10,000+ downloads. JavaScript, Canvas 2D, Capacitor, AdMob, Supabase. · Google Play · Web
- **Zoomie Dash** · 3D runner · Web & Android · In development. Three.js, TypeScript, Vite, Blender, Capacitor.
- **Forgefall** · Fantasy battle royale · Web · In development. Unity 6, C#, URP, Photon Fusion, WebGL.
- **Draw Dash** · Drawing arcade · Web · In development. TypeScript, Canvas 2D, WebAudio, Vite.

TECH STACK

FRONTEND	Vue 3 · Composition API · Vue 2 · TypeScript · JavaScript · HTML · CSS · Tailwind · Pinia · Quasar
BACKEND	Java 8 · 11 · 21 · Micronaut · Spring Boot · Kotlin · Groovy · Python
DATA & MESSAGING	PostgreSQL · Kafka · Flyway · Firebase
DESKTOP & MOBILE	Qt · C++20 · Qt Widgets · QML · Android · Capacitor
AI-ASSISTED DEVELOPMENT	Claude Code · OpenAI Codex · GitHub Copilot · MCP · Skills · AGENTS.md · Spec Driven Development · Context engineering
DEVOPS & TOOLING	Azure DevOps (CI/CD, PRs) · GitHub Actions · Docker · Code signing · Git · Jira
TESTING & PRACTICES	JUnit · Mockito · Testcontainers · Vitest · TDD · Clean Code · SOLID · DDD · Scrum

EDUCATION

Telematics Engineering

Universidad Rey Juan Carlos

LANGUAGES

Spanish and Ukrainian: native

English and Russian: intermediate
